DSK format : DIRStruct FileEntry « on: 15:19, 10 September 15 »

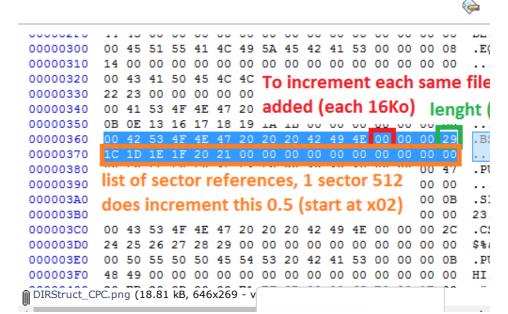

Quote Modify

Who knows more about floppy DIRStruct structure?

Thing I know actually is:

- -A DIREntry is on 4 first sector of dsk, A FileEntry does 32 bytes and matches with 16KB max.
- -if first byte is xE5 (empty char that fill a virgin dsk) FileEntry is ignored.

What is between the red and the green bytes?
